

AMENDMENTS TO THE ABSTRACT

Please substitute the following paragraph(s) for the abstract now appearing in the currently filed specification:

The present invention relates to a playback apparatus, a playback method, and a program for the same that increase the level of convenience of a recording medium and thereby, for example, enable a user to perform playback control processing and the like more easily. An information acquisition unit 353 in a playback control unit 334 allows a holding unit 354 to hold an acquired an Linear Time Code (LTC) change point table 361. An input acceptance processing unit 352 supplies an accepted cue-up instruction to a cue-up processing unit 355. The cue-up processing unit 355 identifies the File Time Code (FTC) of a frame to be cued up, referring to the LTC change point table 361 held in the holding unit 354, and supplies this information to a control unit 351. Based on the information, the control unit 351 creates cue-up command information and supplies it through a command processing unit 356 to a disk recording/playback apparatus which displays a frame image of a frame to be cued up onto a monitor. The invention can be applied to an editing system.
